## PRESS RELEASE

BROOKSVILLE, FLORIDA- January 2, 2011- ICTC (Interconnect Cables Technologies Corp.) is pleased to announce that following its acquisition of the assets of STI (Symbiotic Technologies Inc.) in July of 2010, it has fully integrated that enterprise into its own facility in Brooksville, FL. STI, which was also located in Brooksville, Florida, had been a regional Electronic Manufacturing Services provider for over 20 years. With the integration of STI's assets, ICTC will be able to offer a full range of EMS domestically to complement its extensive offshore capabilities. The formation of this new ICTC EMS division allows ICTC to offer a full range of printed circuit board assembly, both through hole and pick and place, local prototyping services and final box build and testing capabilities to our customers worldwide.

ICTC anticipates further investments in both machinery and personnel in order to enhance further its domestic EMS Division. They have been incorporating their ISO 9001:2008 system throughout the division, and ICTC's recent investments in manufacturing ERP, shop floor control and logistics management systems will be standardized throughout the expanded company. "This acquisition allows ICTC to further support our customers with domestic prototyping for a seamless transition to offshore manufacturing, if and when they need us to do so," says Sareet Majumdar, President of ICTC. With the resources of ICTC, the flex workforce between ICTC's cable and EMS divisions, and with the extensive experience of our production management team, ICTC expects to become a market leader in EMS in the years to come.

### About ICTC USA

ICTC is an ISO 9001:2008-certified, full-service manufacturer and is based in Brooksville, Florida. It also has operations in Dongguan and Ningbo China, and is part of the IC Intracom group of companies with locations in 12 countries around the world. ICTC USA is a Global Manufacturing Solutions provider that specializes in low volume, high mix cable and wire harness assemblies, electronic box builds, PCB assemblies and turn-key services to OEM's worldwide. The company was established in 1988 to provide the rapidly growing electronics market with the highest quality cable assemblies and electronic box builds and has become a reliable partner to manufacturers in the following industries: Aerospace, Audio/Video, Automotive, Commercial, Datacom, Gaming, Industrial Machinery, Lighting, Medical, Military, Renewable Energy and Telecom.
